UNEMPLOYMENT AND EARNINGS AMONG WAGE-EARNERS IN
TORONTO, ONTARIO, CENSUS 1931

INTRODUCTION

This bulletin presents a preliminary statement on unemployment and earnings among wage-earners in the City of Toronto, Ontario. The number of wage-earners for the twelve months period ended June 1st, 1931, is shown by sex under two main heads, (1) Unemployment by industries, occupations and causes, (2) Earnings by occupations, age groups and time worked. The figures are subject to revision.

Definition - The term "wage-earners" as used in the Census, means a person who works for salary or wages, whether he is a bank manager or an unskilled labourer. The term "unemployment" as used in the Census means any loss of time involving a reduction in earnings.

Method of Classification - The classification of wage-earners by industries and occupations is so arranged as to make provision for larger industrial and occupational groupings. It is important to distinguish between the meaning of an occupational as contrasted with an industrial classification. Under the heading "Construction", for example, in the industry tables are included all persons employed therein, regardless of occupation, whereas under the same title in the occupational tables are listed all persons following occupations regarded as "building trades" irrespective of the industries in which they may be followed.

Scope of Unemployment Census - The period of unemployment during the twelve months preceding the date of the Census, June 1st, 1931, was obtained for every wage-earner, together with a statement of the cause of such unemployment, whether it was no job, temporary lay-off, illness, accident, strike or lockout, etc. The wage-earner was asked to state how many weeks, if any, he or she was away from work for each of these causes. In addition he was requested to report the total amount of money earned in the census year.

Unemployment among female wage-earners being much less serious, both in total amount and per individual, than among male wage-earners, the detailed tables for the sexes are presented separately.

PART I - UNEMPLOYMENT

According to the census the number of wage-earners losing time during the period June 1st, 1930, to June 1st, 1931, in the City of Toronto was 89,791. The total number of wage-earners was 246,467, of whom 36.43 per cent showed some unemployment. The total of male wage-earners was 176,417, of whom 70,240 or 39.81 per cent lost time. Out of a total of 70,050 female wage-earners 19,551 or 27.91 per cent were unemployed

for some period during the census year. The aggregate "time-loss" for all wage-earners was 2,120,935 weeks, of which 1,732,945 weeks or 81.71 per cent was reported for males and 387,990 weeks or 18.29 per cent for females.

Table I shows the relative importance of the various causes of unemployment. The outstanding cause, both in the number of wage-earners affected as well as in the weeks lost, was "No Job" - 77.54 per cent of the total "time-loss" being due to this cause. "No Job" together with "Temporary Lay-off" accounted for 92.15 per cent of all unemployment. As between sexes the percentage of unemployment due to these two causes combined was 93.15 for males and 87.65 for females. "Temporary Lay-off" was relatively more important in the total of female unemployment than in the total of male unemployment. The same was true of "Illness". Of the total unemployment among females 10.72 per cent was due to "Illness" while only 5.73 per cent of the total among males was attributable to this cause.

The table also shows the average period of unemployment for wage-earners losing time. The average for "All Causes" for both sexes was 23.62 weeks. For males losing time the average duration of unemployment for "All Causes" was 24.67 weeks and for females 19.85 weeks. The longer average duration of unemployment among males than among females has greater significance when it is recalled that the number losing time represented 39.81 per cent of all male wage-earners as compared with a percentage of 27.91 for females. The average period of unemployment due to "No Job" was considerably longer than for any other cause, being 28.38 weeks for the total number of wage-earners losing time - 29.17 weeks for male wage-earners, and 24.84 weeks for female wage-earners. The average duration of unemployment on account of "Temporary Lay-off" was about half the average for "No Job". The averages for "Illness" and "Accident" were 11.21 weeks and 10.84 weeks respectively. (Table III shows the average period of unemployment based on the total number of wage-earners. On this basis the average for "All Causes" was 8.61 weeks for both sexes, 9.82 weeks for males, and 5.54 weeks for females.)

TABLE I - Wage-earners losing time, classified according to cause and sex, showing the amount and duration of unemployment

Cause of Unemployment	Number of wage-earners who lost some time	Aggregate number of weeks lost	Average number of weeks lost by those losing time	Proportionate importance of various causes (1)
	No.	No.	No.	p.c.
All Causes				
Total	89,791	2,120,935	23.62	100.00
Male	70,240	1,732,945	24.67	100.00
Female	19,551	387,990	19.85	100.00
No Job				
Total	57,941	1,644,500	28.38	77.54
Male	47,365	1,381,818	29.17	79.74
Female	10,576	262,682	24.84	67.70
Temporary Lay-off				
Total	21,841	309,835	14.19	14.61
Male	16,023	232,444	14.51	13.41
Female	5,818	77,391	13.30	19.95
Illness				
Total	12,563	140,804	11.21	6.64
Male	8,483	99,230	11.70	5.73
Female	4,080	41,574	10.19	10.72

TABLE I - Wage-earners losing time, classified according to cause and sex, showing the amount and duration of unemployment - cont'd.

Cause of Unemployment	Number of wage-earners who lost some time	Aggregate number of weeks lost	Average number of weeks lost by those losing time	Proportionate importance of various causes (1)
	No.	No.	No.	p.c.
Accident				
Total	1,336	14,485	10.84	0.68
Male	1,140	12,626	11.08	0.73
Female	196	1,859	9.48	0.48
Strike or Lockout				
Total	282	3,033	10.76	0.14
Male	183	1,971	10.77	0.11
Female	99	1,062	10.73	0.27
Other Causes				
Total	525	8,278	15.77	0.39
Male	319	4,856	15.22	0.28
Female	206	3,422	16.61	0.88

(1) Based on total weeks lost.

Table II classifies the unemployed under eleven main industrial groups showing the relative amount and duration of unemployment between the groups. In amount of unemployment "Manufacturing" was outstanding, accounting for 34.75 per cent of the total weeks lost. As between the sexes it might be added that this group made up 33.18 per cent of the weeks lost by males and 41.75 per cent of the "time-loss" shown by females. "Construction" accounted for 22.77 per cent of the unemployment among males, while "Manufacturing", "Service" and "Trade", showing 41.75 per cent, 31.07 per cent and 18.04 per cent respectively of female unemployment, contributed substantially to the total number of weeks lost by females.

The average number of weeks lost by industry groups is shown based on wage-earners losing time in Table II and on the basis of the total number of wage-earners in Table III. The average duration of unemployment of those losing time as well as of the total number of wage-earners was highest in the "Constructions" and "Unspecified" groups and in the primary industry groups. It should be explained that the "Unspecified" group is composed largely of "General laborers" whose period of unemployment was usually prolonged. The percentages of the total wage-earners losing time in these groups being generally high there were no great differences between the average duration of unemployment based on wage-earners losing time and the average based on the total number of wage-earners. In "Construction", for example, in which 76.51 per cent of the total wage-earners lost time, the average based on wage-earners losing time was 27.31 weeks and the average based on all wage-earners in the group was 20.89 weeks. The remaining industrial groups, with considerably smaller percentages losing time, showed substantial differences between these averages. The important group "Manufacturing", for example, in which 43.82 per cent of all wage-earners lost time, had an average duration of unemployment of 21.86 weeks for wage-earners losing time but only an average of 9.58 weeks for all wage-earners in the group.

TABLE II - Wage-earners losing time, classified according to industry and sex, showing the amount and duration of unemployment

Female	70,050	27.91	387,990	5.54

The relative amount and duration of unemployment as between occupations is illustrated in the two tables that follow. Table IV gives a list of occupations, each showing 20,000 or more weeks "time-loss", selected from the detailed Table 3 (male wage-earners, unemployed by occupation). "Labourers" showed the greatest amount of unemployment, reporting 486,608 weeks lost. The next important occupations in this respect were "Carpenters", with 89,449 weeks lost, and "Salesmen", showing 84,119 weeks of unemployment. The average duration of unemployment based on wage-earners losing time was highest for "Labourers", being 29.44 weeks. "Brick and stone masons", with 27.66 weeks, "Farm labourers", with 27.58 weeks, and "Carpenters", with 26.97 weeks, were also high. The average based on the total number of wage-earners showed the longest period of unemployment for the "Brick and stone masons". The average for this occupation was 24.28 weeks. Other occupations showing extended average duration of unemployment for all wage-earners were "Carpenters", with 20.14 weeks, and "Labourers", with 20.12 weeks. It will be noted that the difference between the average period of unemployment for wage-earners losing time and the average for all wage-earners in the class "Brick and stone masons" was only 3.38 weeks. This would indicate a high percentage of unemployment. The actual figure was 87.78 per cent losing time. On the other hand, occupations with small percentages losing time would, of course, show large differences between these averages. "Office clerks", for example, only 17.22 per cent of whom lost time, showed a difference of 18.30 weeks between the average based on wage-earners losing time and the average based on the total number of wage-earners following the occupation.

TABLE IV - Selected male occupations (20,000 or more weeks time-loss)

Occupation	Number of wage-earners	Number losing some time	Percent of total	Weeks of unemployment	Average weeks lost by all wage-earners	Average weeks lost by those losing some time
	No.	No.	p.c.	No.	No.	No.
Farm labourers	1,503	886	58.95	24,437	16.26	27.58
Sewers - shop or factory	1,367	1,050	76.81	25,102	18.36	23.91
Tailors	1,810	1,242	68.62	30,942	17.10	24.91
Machinists	2,969	1,592	53.62	36,643	12.34	23.02
Mechanics, n.e.s.	4,029	1,959	48.62	45,326	11.25	23.14
Brick and stone masons	1,391	1,221	87.78	33,768	24.28	27.66
Carpenters	4,441	3,317	74.69	89,449	20.14	26.97
Painters, decorators, glaziers	3,188	2,250	70.58	53,413	16.75	23.74
Plumbers, steam fitters, gas fitters	1,372	973	70.92	23,221	16.92	23.87
Truck drivers	4,723	2,097	44.40	47,157	9.98	22.49
Shippers	3,078	1,003	32.59	20,699	6.72	20.64
Salesmen	13,489	3,631	26.92	84,119	6.24	23.17
Other clerical (office clerks)	12,827	2,209	17.22	48,835	3.81	22.11
Labourers and unskilled workers (not agricultural, mining, or logging)	24,190	16,531	68.34	486,608	20.12	29.44

Table V lists a number of occupations, each occupation showing 5,000 or more weeks "time-loss", selected from the detailed Table 4 (female wage-earners, unemployed by occupation). Among female occupations, "Stenographers", "Domestic servants", "Sewers - shop or factory", and "Saleswomen" were each high in the total number of weeks lost. This was due in the case of "Stenographers" and "Domestic servants" to the large number of wage-earners following these occupations and not, as in the case of the "Sewers", to the high percentage showing unemployment. The average duration of unemployment based on wage-earners losing time was usually between 18 and 22 weeks for the selected occupations. The average based on all wage-earners was generally less than 10 weeks. Those occupations showing more than 10 weeks and also greater percentages of their number losing time than were common among female occupations were in the main confined to the clothing industry.

TABLE V - Selected female occupations (5,000 or more weeks time-loss)

Occupation	Number of wage-earners	Number losing some time	Per cent of total	Weeks of unemployment	Average weeks lost by all wage-earners	Average weeks lost by those losing some time
	No.	No.	p.c.	No.	No.	No.
Sewers - shop or factory	3,692	2,175	58.91	43,726	11.84	20.10
Tailoresses	407	242	59.46	5,259	12.92	21.73
Dressmakers	804	372	46.27	6,825	8.49	18.35
Milliners	490	312	63.67	6,045	12.34	19.38
Telephone operators	1,972	534	27.08	7,967	4.04	14.92
Packers, wrappers, labellers	1,692	830	49.05	16,008	9.46	19.29
Saleswomen	5,628	1,803	32.04	35,536	6.31	19.71
Nurses - graduate	1,276	323	25.31	7,172	5.62	22.20
Matrons - housekeepers	1,625	280	17.23	6,172	3.80	22.04
Waitresses	1,711	613	35.83	11,393	6.66	18.59
Domestic servants, n.e.s.	10,600	2,084	19.66	45,400	4.28	21.79
Stenographers, typists	11,872	2,273	19.15	47,864	4.03	21.06
Bookkeepers, cashiers	3,919	715	18.24	14,571	3.72	20.38
Other clerical (office clerks)	5,841	974	16.68	16,055	2.75	16.48
Labourers and unskilled workers (not agricultural, mining, or logging)	740	383	51.76	9,378	12.67	24.49

The detailed tables Nos. 1 to 4 classify the unemployed in industries and occupations having ten or more persons by causes of unemployment. These industries and occupations have been arranged according to a scheme of classification which will permit compilations to be made by larger groupings.

PART II - EARNINGS

The detailed tables in Part II classify wage-earners by occupation and sex, earnings and weeks of employment, under nine age groups. Earnings have been stated in hundreds of dollars.

Out of a total number of 246,467 wage-earners in the City of Toronto 238,806 or 96.89 per cent reported earnings. The number of males reporting

earnings was 170,679 and the aggregate amount of their earnings in the twelve month period was \$209,500,800. Females reporting earnings numbered 68,127 and their earnings amounted to \$49,205,000. The total number of weeks worked by all wage-earners reporting earnings was 10,377,625 weeks, the males having worked 7,176,878 weeks and the females 3,160,747 weeks.

Table VI shows the average yearly earnings, the average weekly earnings, and the average number of weeks of employment of wage-earners reporting earnings, by sex and age groups. The trend by age groups of average yearly and average weekly earnings for males was steadily upward until a maximum was reached in the age group 45-54, and then declined with regularity in the older age groups. Female earnings followed a similar course, except that the highest average was in the age group 35-44. Average yearly earnings for males of all ages were \$1,227, and for females \$722, or 58.84 per cent of the male average, while average weekly earnings for males were \$29.19 and for females \$15.57, or 53.34 per cent of male earnings.

The trend by age-groups of the average period of employment for males was regularly upward after 18 years of age, attaining its highest level in the age group 35-44. In the subsequent age groups there was a steady falling away. For females the average period of employment increased in each succeeding age group until a maximum was reached in the age group 25-34. In the following age groups the course of the average duration of employment was steadily downward until the final age group in which the average showed some recovery.

It will be noted that the average number of weeks of employment for males reporting earnings was 42.05 weeks and the average for females was 46.39 weeks. In Part I the average period of unemployment for the total number of male wage-earners was shown to be 9.82 weeks and for females 5.54 weeks. The sum of the figures of employment and unemployment is not 52 weeks either in the case of the males or of the females. The slight discrepancy is due to the fact that the averages for the weeks employed were based on wage-earners reporting earnings and not upon the total number of wage-earners.

TABLE VI - Wage-earners reporting earnings, by sex and nine age groups, showing the average yearly earnings, average weekly earnings and average number of weeks employed

Ages	Average yearly earnings		Average weekly earnings		Average number of weeks of employment	
	Male	Female	Male	Female	Male	Female
	\$	\$	\$	\$	No.	No.
17 years and under	375	365	8.84	8.73	42.39	41.81
18 - 19 years	556	525	13.10	11.83	40.95	44.40
20 - 24 years	803	665	19.43	14.23	41.34	46.73
25 - 34 years	1,154	812	27.53	17.10	41.92	47.47
35 - 44 years	1,479	888	34.23	18.85	45.22	47.09
45 - 54 years	1,513	843	35.56	18.16	42.55	46.44
55 - 64 years	1,415	739	34.68	15.98	40.80	46.24
65 - 69 years	1,276	546	32.41	12.27	39.56	44.47
70 years and over	1,235	548	31.51	11.75	39.19	46.61
All ages	1,227	722	29.19	15.57	42.05	46.39

Table VII shows the average yearly earnings, the average weekly earnings and the average number of weeks of employment of wage-earners, by sex and age groups, for the census year 1921. As far as the age grouping in 1921 is comparable with that of 1931 it appears that the trend of earnings by ages was similar to the course described for the latter census year. It will be noted, however, that average yearly and average weekly earnings for males were highest in the age group 50-64 and for females in the age group 25-49. For both sexes average yearly earnings in 1921 were slightly higher than in 1931 though average weekly earnings were lower than in the recent census year. Higher average yearly earnings in 1921 were accounted for by the fact that the average number of weeks of employment was 46.16 weeks for males and 48.13 weeks for females in that year while in 1931 the averages were only 42.05 weeks for males and 46.39 weeks for females. It might be added that average yearly earnings for males were higher in 1921 than in 1931 for wage-earners under 25 years of age and appear to have been lower in the former census year for males 50 years of age and over. Average weekly earnings for males under 25 years of age were greater in 1921 than in 1931 but for those above that age were consistently higher in the latter year than in 1921. For females both average yearly and average weekly earnings were higher in 1921 than in 1931 for wage-earners under 25 years of age but in the subsequent age groups females showed higher earnings in 1931 than in the earlier census year.

Average yearly earnings among females in 1921 were 57.69 per cent of male average earnings and, on a weekly basis, 55.34 per cent of average earnings for males. It has been stated that average yearly earnings for females in 1931 were 58.84 per cent of the average for males and average weekly earnings for females 53.34 per cent of the male average. In other words, average earnings for females, on a yearly basis, were a slightly higher percentage of the average for males in 1931 than in 1921, but, on a weekly basis, the percentage in 1921 was greater than in 1931. The fact that average yearly earnings for females were a higher percentage of male earnings in 1931 than in 1921, though a smaller percentage, on a weekly basis, than in 1921, is accounted for by the fact that the average period of employment for females was 4.34 weeks greater than for the males in 1931 while in 1921 it was only 1.97 weeks greater.

TABLE VII - Wage-earners reporting earnings, by sex and six age groups, showing the average yearly earnings, average weekly earnings, and average number of weeks employed, for the census year 1921

Ages ^x	Average yearly earnings		Average weekly earnings		Average number of weeks of employment	
	Male	Female	Male	Female	Male	Female
	\$	\$	\$	\$	No.	No.
10 - 14 years	317	277	7.29	6.70	43.41	41.31
15 - 19 years	634	580	14.09	12.39	44.99	46.80
20 - 24 years	992	742	22.09	15.33	45.03	48.42

65 years and over	1,209	478	26.46	10.07	45.72	47.48
All ages	1,262	728	27.34	15.13	46.16	48.13

^x1921 age grouping

Table VIII gives the total number of wage-earners, by sex and age groups, together with their percentage distribution by ages. The percentage of females under 20 years of age was considerably greater than was the case among males, 16.82 per cent of the females being under that age as compared with 6.81 per cent for the males. In the older age groups, however, the percentages for the sexes were reversed. Only 12.83 per cent of the females were 45 years and over while the percentage of the males above that age was 30.05. Out of a total number of 246,467 wage-earners, 176,417 or 71.58 per cent were males and 70,050 or 28.42 per cent were females.

TABLE VIII - Wage-earners, by sex and nine age groups, showing the number and percentage distribution by ages

Ages	Number of wage-earners			Percentage distribution of total wage-earners		
	Total	Male	Female	Total	Male	Female
	No.	No.	No.	p.c.	p.c.	p.c.
17 years and under	8,196	4,359	3,837	3.33	2.47	5.48
18 - 19 years	15,598	7,651	7,947	6.33	4.34	11.34
20 - 24 years	43,586	23,921	19,665	17.68	13.56	28.07
25 - 34 years	65,270	46,046	19,224	26.48	26.10	27.44
35 - 44 years	51,818	41,426	10,392	21.02	23.48	14.84
45 - 54 years	37,747	31,892	5,855	15.32	18.08	8.36
55 - 64 years	17,805	15,394	2,409	7.22	8.72	3.44
65 - 69 years	4,220	3,699	521	1.71	2.10	0.74
70 years and over	2,229	2,029	200	0.91	1.15	0.29
All ages	246,467	176,417	70,050	100.00	100.00	100.00

Table IX shows the numerical and percentage distribution of wage-earners by age groups for the census year 1921. As in 1931 the percentage of females under 20 years of age was much greater than for the males, 22.71 per cent of the females being under that age as compared with a percentage of 9.33 for the males. Of the total number of wage-earners, 13.19 per cent was under 20 years of age in 1921 as compared with 9.66 per cent in 1931. It is not possible to make comparison between the census years in regard to the percentage of total wage-earners, 45 years of age and over. However, it might be observed that 2.08 per cent of the total wage-earners was 65 years and over in 1921 as compared with a percentage of 2.62 in 1931. In 1921 the total number of wage-earners was 185,443, of whom 131,991 or 71.18 per cent were males and 53,452 or 28.82 per cent were females.

TABLE IX - Wage-earners, by sex and six age groups, showing the number and percentage distribution by ages, for the census year 1921

Ages ^x	Number of wage-earners			Percentage distribution of total wage-earners		
	Total	Male	Female	Total	Male	Female
	No.	No.	No.	p.c.	p.c.	p.c.

All ages	185,443 ⁽¹⁾	131,991	53,452	100.00	100.00	100.00

^x1921 age grouping

(1) Does not include wage-earners not reporting earnings. The omission is small.

In the detailed tables 5 and 6 earnings and weeks of employment are given for all occupations having 10 or more persons. They have been arranged so as to facilitate comparison of earnings between related occupations within occupational groups and to provide for comparative studies as between groups. It is also possible to compare the average number of weeks of employment by age for selected occupations.
